Centrifugal Oil Separators

MP200

- The MP200 has been designed for an oil sump capacity of 35 to 175 litres.
- New bowl design enables a sludge capacity of up to 1.3 litres.
- The new design also enables the oil throughput to be increased.
- Separation efficiency increases due to bowl and bowl disc design.
- MODBUS and CANBUS compatible monitoring system, that reduces maintenance costs and unnecessary cleaning.
- The MP200 has been designed to be fully interchangeable with current products on the market. This means it will fit with existing mountings without any modifications being required.
- Faster bowl speed than any existing market products. This increases centrifugal force, creating better and quicker separation.
- Optional extras are available:
 - Specialised tools
 - Bespoke cut off valve pressure
 - Pneumatic assisted oil return

Oil Inlet - Standard 1/2" B.S.P
(Others available on request)

Fixing Holes - Standard M12
(Others available on request)

C.O.V. (Bar) - Per request 2.5 / 2.1 / 1.5

Advantages

- Reduction in engine wear
- Reduction in use of lubricating oil
- Aids clean combustion for reduced exhaust emissions
- Saves man hours in cleaning
- Reduced waste disposal costs
- Simple to operate and maintain
- Same day dispatch available on all spares
- Extends service intervals
- Extends life of full flow filters
- Capital cost investment returned quickly
- Environmentally friendly

Markets

- Marine and power
- Automotive
- Trains, trucks & buses
- Agriculture
- Mining
- Construction
- Defence
